## Android apple store app

(Pocket-lot) - Apple's iTunes Store is exclusive to iOS devices. This is a fact of life. However, a recent report has claimed that Apple is now considering giving Android device users access by launching a standalone iTunes app on Google Play. Billboard has reported - citing three unnamed sources - that Apple may one day launch an iTunes app for Android phones, mainly because Android is growing faster than the iPhone. Oh, and there's reportedly a double-digit decline in music download sales for the US iTunes Store - and Apple wants to stem that loss. To do that, it reportedly wants to give Android users the ability to buy music from iTunes instead of Google Play. But that's not all: Apple is also talking to senior label executives about launching an on-demand streaming service to rival Spotify and Beats Music, among others. It is unclear how such a service would be different from iTunes Radio. That said, Apple seems to be exploring all monetary options at the moment. Robert Kondrk, an iTunes executive, has even written an exclusive album release window for digital versions of albums ahead of physical CD releases. READ: Apple iTunes Radio vs Samsung Milk: What's the Difference? Although all that sounds nice and dandy, it's important to remember that Apple still has a lot of bureaucracy to remove before it can just launch a new streaming service let alone an iTunes Store app for Android. It has to go through difficult negotiations with record labels, and apparently the company is still in the early stages of this process. We may be months or years away from seeing these final products. That's if they themselves come to fruition. We have contacted Apple for a comment and will be updated as more information becomes available. Writing by Elyse Betters. The millions of great apps available in the App Store are unlocking the true power of iPhone and iPod touch. But with so many to choose from, finding apps can sometimes be a challenge. Fortunately, Apple has structured the App Store to highlight great apps and to help you find the ones that do exactly what you need. Read on to learn how to use the App Store on iOS devices like iPhone and iPad. Lifewire / Brooke Pelczynski This article covers devices running iOS 11 and iOS 12. Many of the ideas discussed here apply to earlier versions, but the exact layout and options in earlier versions may be different. The App Store app home screen is the Today tab. The Today tab promotes select apps, selected by Apple for their quality or relevance to current events (such as apps with Thanksgiving recipes during the week of Thanksgiving). You can also find Today's Games and the App of the Day on this screen. Both apps are selected by Apple and updated daily, although you can see older choices by scrolling down. Tap one of the featured apps to learn more about them. The daily list is a smaller apps on a theme, such as streaming video apps or photo apps. The Games & Apps found categories the bottom menu bar is similar to today, except that they have a slightly different focus. Both have features about apps picked by Apple and collections of related apps on various topics. The most important difference, of course, is that the Games tab only has games, while Apps has all the other types of apps in the store. Tap an item listed in one of the categories to see more about it or to download/purchase it. The App Store app makes it easy to find the apps you're looking for in two ways: searching or browsing. To search for an app: Tap the Search tab. Enter the name or type of app you're looking for (such as meditation, photography, or expense tracking). As you type, suggested results are displayed. If you match what you're looking for, tap it. Otherwise, complete typing and tap search on your keyboard for a full set of results. If you prefer to discover new apps on your own, it's for you to browse the App Store. What to do: Tap the Games or Apps tab. Both tabs have alternating sections of single highlighted apps and lists of related apps. Swipe up and down to browse apps. Swipe left and right to view sets of related apps. Swipe to the bottom of the screen to view categories for each section. Tap See all to view all categories. Tap a category and you'll get apps presented in a similar layout, but everything from the same category. To learn more about an app, tap it. The app detail screen contains all kinds of useful information about the app, including: Get/Buy: To download the app, tap this button (more on this in the next section). Free apps have the Get button, while paid apps have a button with the price. Star rating: The average rating assigned to the app by users, plus the number of reviews submitted. To see individual reviews and more details about the grade, scroll down to the Grades & reviews section and tap View all. Rating: The app's popularity rating in its category. Age: A rating for the app, which shows what age it's appropriate for. Screenshots/videos: Get a preview of how the app looks from these screens and videos. Apps for other devices: If there are versions of the app for iPad, Apple Watch, or Apple TV, this section displays screenshots for each device. Description: More details about the app, features, and any subscription/app purchase options it offers. Version history: Each version of the app is listed here, plus notes about what's changed with each update. Information: This section contains information such as download size and in-app purchases. Tap App app purchases to view the full set of options. Supports: This section shows the other Apple-specific features that your app supports, including Family Sharing. Once you've found an app you want to download, follow these steps: Tap the Get or Price button. This can be done from search results, Game or App tabs, and more. When you do this, you may be asked to enter your Apple ID password to approve the download/purchase. download/purchase. delivered by entering your password, Touch ID or Face ID. A menu pops up from the bottom of the screen with information about the app and a Cancel button. Double-click the Page button to complete the transaction and install the app. Developers will release app updates when there are new features, bug fixes, and to add compatibility to new versions of iOS. After you install some apps on your phone, you'll need to update them. To update your apps: Tap the App Store app to open it. Tap the Updates tab. Review the available updates (refresh the page by swiping down). To learn more about the update, tap more. Tap Update to install the update. If you prefer not to update apps manually, you can set your phone to download and install them automatically when they are released. Here's how: Tap Settings. Tap the iTunes & App Store. In the Automatic Downloads section, move the Updates slider to on/off. Even if you delete an app from your phone, you can download it for free again. That's because once you've downloaded an app, it's also added to your iCloud account. The only time you can't reload an app is if it's no longer available in the App Store. To download an app again: Tap the App Store app. Tap Updates. Tap the account icon in the upper-right corner (this could be a photo, if you've added one to your Apple ID). Tap Purchased. (You may also need to tap my purchases if you're using Family Sharing.) By default, the list of apps to All apps, but you can also tap this iPhone just to see apps that aren't currently installed. Press the download button (the cloud with the down arrow in it). There are several ways to get apps outside the App Store. Photo Credit: Stuart Kinlough/Icon Images/Getty Images The tips listed here simply scratch the surface of the App Store. To learn more — either advanced tips or how to fix problems when they occur — check out these articles: The official Apple Store app is an easy and convenient way to browse and buy new Apple products directly from your iPhone. It is available via the App Store as a free download. With the App Store app, you can also purchase accessories for Apple products, schedule Genius Bar deals in your local Apple Retail Store, and even express payment for in-store purchases through EasyPay. Once you've installed the App Store app, you're ready to start browsing and purchasing products. The main menu gives you a list of product categories to choose from. The App Store app is essentially a custom iPhone version of the Apple Online Store. Unfortunately, the App Store app in its current form is not optimized for iPad. However, you can still download and run it on any iPad. Almost everything you can access store.apple.com on a desktop computer is available through the App Store app. If you buy iPod, you can even request a custom engraving right through the app. For those who live near an Apple Retail Store, you can request a pickup if available for the product you are ordering. For those who order a new Mac computer, you can customize your options in the same way as you would through the entire full Apple Online Store. You can then track your order and even sign up for push notifications when a product is delivered or changes status. If you need to go to your local Apple Store for something, you can schedule a Genius Bar appointment in advance via the App Store app and even add it right to your calendar. The app can then notify you when the appointment comes up, so you don't forget it. When you get to the App Store, you can check in to appoint using the App Store app and even use it to pay for purchases through EasyPay, greatly minimizing your latency. Anyone who has ever been to a crowded Apple Store will appreciate EasyPay. Whether you're planning a trip to your local Apple Store and want to streamline your visit or just want to have the added convenience of being able to order your products online, the App Store app is the best way to do both. We can earn a commission for purchases using our links. get more information. More.
